This publication is the proprietary of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical for any purpose, in whole or in part, without the express written permission of SHARP. Express written permission is also required before any use of this publication may be made by a third party.

The application circuit examples in this publication are provided to explain the representative applications of SHARP's devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP's devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest device specification sheets before using any SHARP's device.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact SHARP in order to obtain the latest specification sheets before using any SHARP's device. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

The devices in this publication are designed for general electronic equipment use.

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

•Transportation control and safety equipment(i.e.,aircraft, trains, automobiles, etc.)

•Traffic signals•Gas leakage sensor breakers •Alarm equipment•Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

•Military and space applications •Nuclear power control equipment

•Medical equipment for life support

Contact a SHARP representative, in advance, when intending to use SHARP's devices for any "specific" applications other than those recommended by SHARP.

Contact and consult with a SHARP representative if there are any questions about the contents of this publication.

4

1. Application

This specification applies to color TFT-LCD module, LQ084S3DG01.

- 2. Overview
  - This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor).
  - It is composed of a color TFT-LCD panel, driver ICs, control circuit and powersupply circuit and a backlight unit. Graphics and texts can be displayed on a 800×3×600 dots panel with 262,144 colors by supplying 18 bit data signal (6bit/color), two timing signals, +3.3V DC supply voltage for TFT-LCD panel driving and supply voltage for backlight.
  - •The TFT-LCD panel used for this module is a low-reflection and higher-color-saturation type. Therefore, this module is also suitable for the multimedia use.
  - Viewing angle is 6 o'clock direction.
  - •This module is the type of wide viewing angle and high brightness(350cd/m<sup>2</sup>). Backlight-driving DC/AC inverter is not built in this module.
  - •This module is adapted to RoHS compliance.

#### 3. Mechanical Specifications

Parameter	Specifications	Unit
Display size (Diagonal)	21.3 (8.4"type)	cm
Active Display area	170.4(H)×127.8(V)	mm
Pixel format	800(H)×600(∨)	pixel
	(1  pixel=R+G+B  dots)	_
Pixel pitch	0.213(H)×0.213(V)	mm
Pixel configuration	R,G,B vertical stripe	
Display mode	Normally white	
Dimension *1	199.5(W)× 149.5(H)×11.6 (D)	mm
Mass	405 (MAX.)	g

\*1. Protrusions not included. Refer to Fig.1 TFT-LCD Module Structure Diagram for details.

### 4. Input Terminals

4-1. TFT-LCD Panel driving section

CN1 Used connector:DF19G-30P-1H(56) (HROSE ELECTRIC CO.,LTD) Table 4-1

Pin No.	Symbol	Function	Remarks
1	GND	— —	_
2	Vcc	+3.3V power supply	
3	Vcc	+3.3V power supply

28	NC		_
29	СК	Clock signal for sampling each data signal	
30	GND		-

4-2. Backlight fluorescent tube driving section

Used connector : BHR-04VS-1(JST)

Corresponding connector :SM04(4.0)B-BHS(JST)

Pin no.	Symbol		Function								
1	Vhigh	Power supply for lamp	(High voltage terminal)								
2	Vhigh	Power supply for lamp	(High voltage terminal)								
3	NC	This is electrically open	ied.								
4	Vlow	Power supply for lamp	(Low voltage terminal)								

[Note]

The input voltage wave forms to terminal ① and terminal ② should be in a same phase.

It has the possibility to discharge abnormally between the terminals in case of input in a reversed phase.

#### 5. Absolute Maximum Ratings

Parameter	Symbol	Condition	Ratings	Unit	Remark
Input voltage	VI	Ta=25℃	$-0.3 \sim Vcc+0.3$	V	[Note1]
+3.3V supply voltage	Vcc	Ta=25℃	$0 \sim +5.5$	V	_
Storage temperature	Tstg	_	$-30 \sim +80$	°C	[Note2,3]
Operating temperature (Panel surface)	Topp		$-30 \sim +80$	°C	[Note2,3,4,5]

[Note1]CK, R0~R5, G0~G5, B0~B5,ENAB

[Note2] No parameter is allowed to exceed the range.

[Note3]Humidity:95%RH Max. at Ta≦40°C.

Maximum wet-bulb temperature should be 39°C or less at Ta>40°C. No condensation.

[Note4] The Panel surface, When backlight is on. (Reference)

[Note5]Only operation is guarantied at operating temperature. Contrast, response time, and other display quality should be evaluated at +25°C.

Ta=25℃

One step solution for LCD / PDP / OLED panel application: Datasheet, inventory and accessory! www.panelook.com

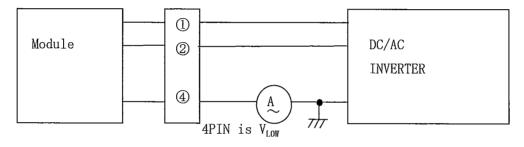

#### 6-2. Backlight Driving Section

The backlight system is an edge-lighting type with two CCFTs (Cold Cathode Fluorescent Tube). The characteristics of single lamp are shown in the following table.

						Ta=28
Parameter	Symbol	Min.	Тур.	Max.	Unit	Remarks
Lamp voltage	VL	340	380	420	Vrms	IL=6mArms
Lamp current	IL	3.0	6.0	6.5	mArms	[Note1]
Lamp power consumption	PL		2.3	—	W	[Note2]
Lamp frequency	FL	45	-	100	KHz	
Kick-off voltage	Vs	—	_	890	Vrms	Ta=25℃
			_	1,000	1	Ta=-10°C[Note3]
Lamp life time	LL	_	50,000	—	hour	[Note4]

[Note1] Lamp current is measured with current meter for high frequency as shown below.

[Note2] At the condition of  $Y_{L} = 350 \text{ cd/m}^2$ 

[Note3] The open output voltage of the inverter shall be maintained for more than 1sec; otherwise the lamp

may not be turned on.

The input voltage wave forms to terminal ① and terminal ② should be in a same phase. It has the possibility to discharge abnormally between the terminals in case of input of a reversed phase.

For the sake of the safety, please so design the inveter as to prevent abnormal discharge when one of the two lamps is broken or reaches the end of life.

[Note4] a)Lamp life time is defined as the time until it becomes the conditions either ① or ②

- by continuous lighting under the standard condition(Ta= 25°C, IL= 6m Arms\*2).
- ① When a brightness of lamp surface became 50% of the initial value under the standard condition.
- ② When a kick-off voltage in  $Ta = -10^{\circ}C$  exceeded maximum value 1,000 Vrms.
- b) In case of operating under lower temp. environment, the lamp exhaustion is accelerated and the brightness becomes lower.

(Continuous operating for around 1 month under lower temp. condition may reduce the brightness to half of the original brightness.)

In case of such usage under lower temp. environment, periodical lampexchange is recommended.

[Note] The performance of the backlight, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. When you design or order the inverter, please make sure that an inadequate lighting caused by the mismatch of the backlight and the inverter (miss-lighting, flicker, etc.) never occur. When you confirm it, the module should be operated in the same condition as it is installed in your instrument.

9

7. Timing Characteristics of Input Signals

Timing diagrams of input signal are shown in Fig.2.

	Parameter	Symbol	Min.	Тур.	Max.	Unit
Clock	Frequency	1/Tc	<u> </u>	40	42	MHz

Direction of panel viewing angle		—			6		o'clock	[Note6]

#### 9. Optical Specification

Ta=25°C, Vcc=+3.3V

times Measuremed 30 minutes after turning on.

(typical condition:IL=6mArms)

The optical specification must measured in a dark room or equivalent state with the method shown in Fig.3 below.

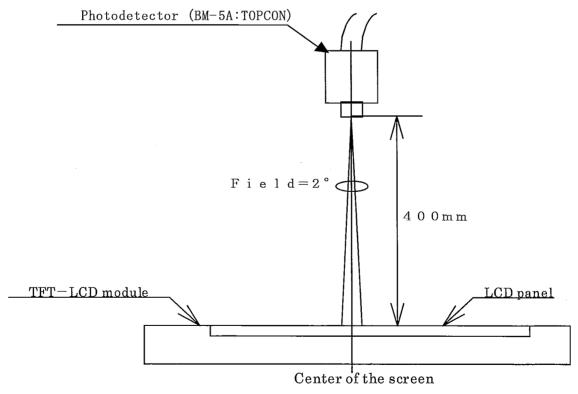

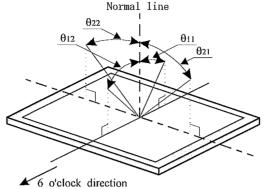

Fig.3 Optical characteristics measurement method

[Note2] Definition of contrast ratio:

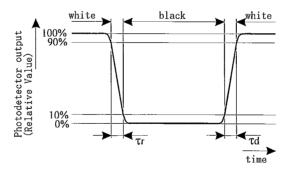

The contrast ratio is defined as the following.

Contrast Ratio (CR) = Luminance (brightness) with all pixels white Luminance (brightness) with all pixels black

The best viewing angle of this module is slightly leaned to 6 o' clock from normal line. In the field where  $\theta_{12}$  exceeds this angle, gray-scale is reversed partially. The gray-scale in the field of 12 o' clock direction is brighter than that of 6 o' clock direction and isn't reversed.

[Note3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note4] This shall be measured at center of the screen.

[Note5]Backlight :ON, TFT-LCD :Power and Signal OFF(Normally White state)

[Note6] In the direction of 6 o'clock, Gray scale reverse occurs.

10. Display Quality

The criteria for the display quality of the color LCD module depends on Incoming Inspection Standard.

- 11. Handling Precautions
  - a) Be sure to turn off the power and signals for module before pluging/unpluging cable to/from the connector.
  - b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
  - c) Since the front polarizer is easily damaged, pay attention to avoid rubbing with something hard or sharp.
  - d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
  - e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
  - f) Since the panel is made of glass and refined wires and components, it may break, crack or internal wire breaking if dropped or bumped on hard surface. Handle with care.
  - g) Since CMOS LSI is used in this module, pay attention to static electricity and ground the human body when handling to prevent failure.
  - h) Observe all other precautionary requirements in handling electronic components.
  - i) This module has its circuitry PWBs on the rear side and should be carefully handled in order not to be stressed.
  - j) The polarizer surface on the panel is treated with Anti-Glare for low reflection. In case of attaching protective board over the LCD. Be careful about the optical interference fringe etc. which degrades display quality.
  - k) Connect GND to 4 place of mounting holes to stabilize against EMI and external noise.
  - I) There are high voltage portions on the backlight and very dangerous. Careless touch may lead to electrical shock. When you exchange lamps or service, please turn off the power.
  - m) Be sure not to apply tensile stress to the lamp lead cable.
- 12. Packing Form
  - a) Piling number of cartons: MAX. 6
  - b) Package quantity in one carton: 10 pcs
  - c) Carton size :  $408(W) \times 203(D) \times 244(H)$ mm
  - d) Total mass of 1 carton filled with full modules: 6 kg

7	Shock test	Max. acceleration : 490m/s <sup>2</sup>					
	(non- operating)	Pulse width : 11ms, half sine wave					
		Direction : $\pm X, \pm Y, \pm Z$ once for each direction.					

#### 13. Reliability Test Items

#### [Result Evaluation Criteria]

Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function.

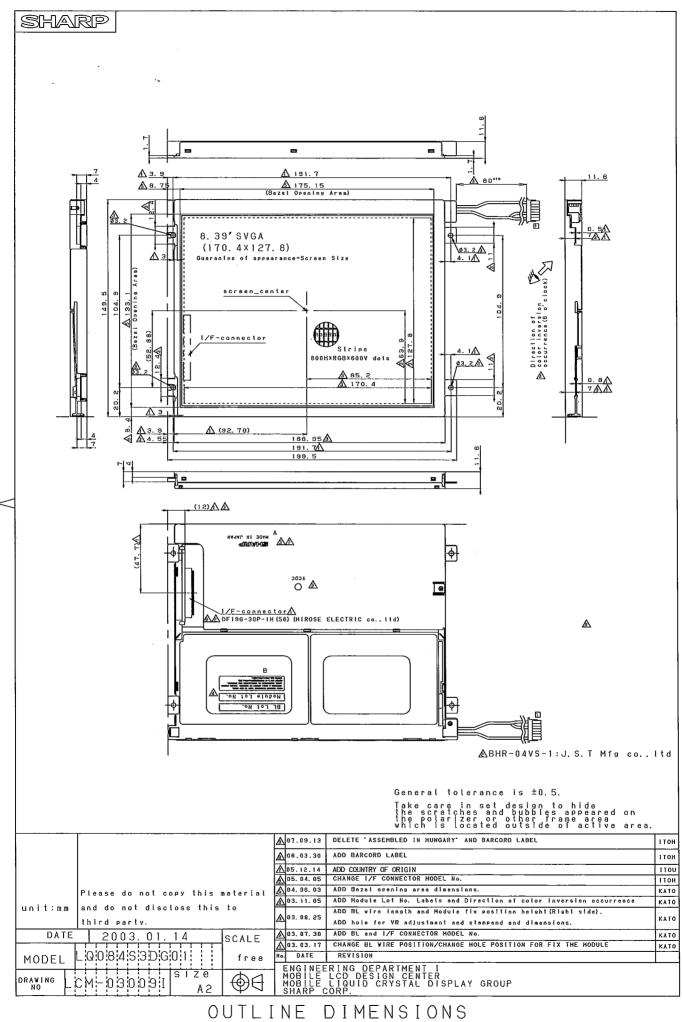

#### 14. Others

- 2) Adjusting volume have been set optimally before shipment, so do not change any adjusted value. If adjusted value is changed, the specification may not be satisfied.
- 3) Disassembling the module can cause permanent damage and should be strictly avoided.
- 4) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- 5) If any problem occurs in relation to the description of this specification, it shall be resolved through discussion with spirit of cooperation.
- 6) Do not use LCD module in the atmosphere of corrosive gases, such as sulfide gas or chlorine gases. Polarizer may be deteriorated or cause chemical reaction that can lead to short circuits at the terminal points. Do not use the material, which compounds contain sulfide or chlorine compounds in the vicinity of LCD module. At high temperature, these compounds may produce corrosive gases.
- 7) Do not expose the module to direct sunlight or intensive ultraviolet rays for many hours; liquid crystal is deteriorated by ultraviolet rays.

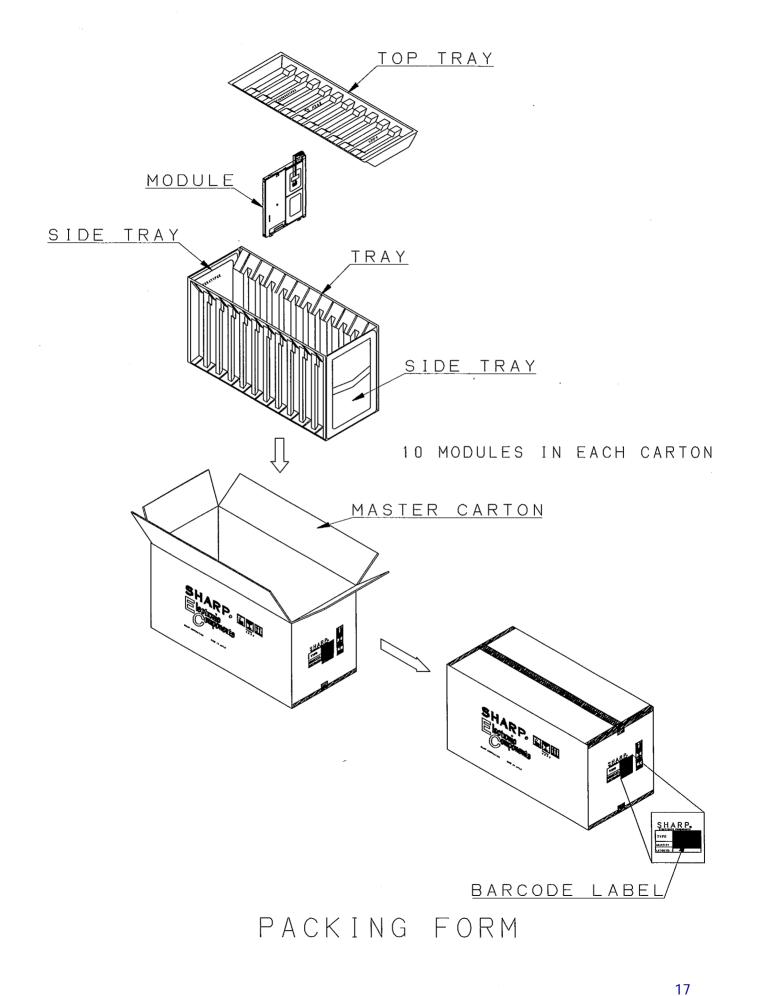

16
